

KS2 Problem of the Day

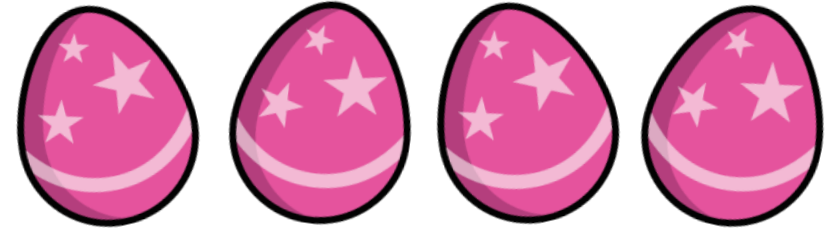

Monday 26th March 2018

- 1 The graph shows the temperature recorded in a town one day last summer.

How much did the temperature increase by between 9am and 2pm?

- 2 A factory produces Easter eggs.

In January the factory produces 263,000 eggs.

Every month it produces 78,000 more eggs than the previous month.

How many eggs did the factory produce in total in January, February and March?
